A general information's session about

## **Opportunities for Erasmus+ stages in Cagliari University for UPJŠ master and PhD students**

*Monday, 26.09.2016 at 10:00*

Given by invited speaker

**Francesca Mocci**

*(University of Cagliari, Italy)*

- her scientific activity is mainly directed to the study of conformational preferences of organic and bio-organic molecules, their interactions with other molecules and ions. These researches are carried out by means of molecular simulations and computational modelling techniques often combined with NMR experimentation. The employed computational techniques are based either on quantum or classical mechanics, and recently she became involved in the development of coarse grained models. Part of these studies involve collaborations either with national or international groups.

**Place:** Jesenná 5, Košice, Laboratory of molecular simulations and advanced visualizations
